- Recovering data can be done at any time, **free of charge with no support calls** required
- CyberSecure are **approved suppliers** to the Attorney-General's Department
- A **free, huge 15GB trial account** is available by visiting [www.CyberSecure.com.au/trial](http://www.CyberSecure.com.au/trial)

Backup & recovery is one of the major headaches for IT administrators and using traditional methods it's always been one of the most difficult and time-consuming tasks, often being neglected.

With CyberSecure, you can simplify, manage and consolidate the backup & recovery of workstations and servers and have peace-of-mind that your critical business information is safe.

Simply install CyberSecure and choose the data to backup - select regular files, Microsoft® Exchange or SQL Server®, set the automatic backup schedule and you're done.

Your data is first encrypted, then delivered through a dedicated SSL tunnel directly to CyberSecure's high-integrity servers located in professional carrier-grade Australian data centres.

After the initial backup, only the changes are required to be uploaded, resulting in not only reduced bandwidth on your internet link, but a smaller backup window.

Feature	Benefit
Strong data encryption	Ensures secrecy of data using 256-bit AES encryption before leaving your network.
Highly secure servers	Banks and government agencies are just some of the customers using the same facilities.
Volume Shadow Copy support	Backs up open files, Exchange & SQL databases whilst in use without shutting down running apps.
Detailed backup reports	Status reports are delivered after every backup, providing administrators with immediate insight into backup performance.
Delta differential technology	Uploads only the changes between backups. Works on a binary level even within files.
Previous versions	Allows recovery of past versions of backups from a specific date or a range of dates.
