- A **free, 30-day trial account** is available by visiting [www.CyberSecure.com.au/trial](http://www.CyberSecure.com.au/trial)

Backup & recovery is one of the major headaches for IT administrators and using traditional methods it's always been one of the most difficult and time-consuming tasks, often being neglected.

With CyberSecure, you can simplify, manage and consolidate the backup & recovery of workstations and servers and have peace-of-mind that your critical business information is safe.

Simply install CyberSecure and choose the data to backup - select regular files, Microsoft® Exchange or SQL Server®, set the automatic backup schedule and you're done.

Your data is first encrypted, then delivered through a dedicated SSL tunnel directly to CyberSecure's high-integrity servers located in professional carrier-grade Australian data centres.

After the initial backup, only the changes are required to be uploaded, resulting in not only reduced bandwidth on your internet link, but a smaller backup window.

Feature	Benefit
Same-day physical recovery	Recover your data as soon as you need it with our Australia-wide to-your-door recovery service.
Secure encryption & self-healing storage	Encryption means that only you can access your data. Keeps your data safe from corruption by retaining multiple copies data within our storage cloud.
Open-file backup	Backs up open files, Exchange emails and SQL databases with zero impact on running services.
Backup status reports	Status reports are delivered after every backup, providing administrators with immediate insight into backup performance.
Efficient backups	Uploads only the changes between backups. Works on all files including databases.
Previous versions	Allows recovery of past versions of backups from a specific date or a range of dates.
