

CYBERSECURE™ ONLINE BACKUP - SIMPLE, SAFE AND AFFORDABLE PROTECTION.

PROTECTING YOUR DATA HAS NEVER BEEN EASIER

FAST BACKUP FACTS

- Hardware failure & human error accounts for nearly all incidents of data loss
- 60% of companies that lose their data will shut down within 6 months of the disaster
- All types of data loss are avoidable by using CyberSecure to protect your data
- Most people don't backup their data - an even less proportion of those who do backup actually test their backups are working!
- Our compression technology used can reduce your files down to 50% of their original size
- The CyberSecure software keeps you informed at every stage with status reports sent to you via email

Backup & recovery is one of the major headaches for everyone and using traditional methods it's always been one of the most difficult and time-consuming tasks, often being neglected.

With CyberSecure, protecting your most important data has never been easier - simply install the software and within minutes you'll be encrypting & backing up your data to CyberSecure's high-integrity Australian storage servers, safe in the knowledge that your data is protected from disaster and deletion.

No longer do you need to worry about losing data!

CyberSecure Feature	Benefit
Data encryption	Protects your data using 256-bit AES encryption before it leaves your computer. With your secret password, you are the only one who can decrypt and access your data.
Secure servers	CyberSecure's servers are located in high-security Australian datacentre facilities, the very same purpose-built bunkers used by banks and government agencies to store their data. Our servers have fault-tolerant mechanisms, which means they are specifically designed for storing "mission-critical" data.
Automatic backup	Your backups run automatically in the background at a time specified by you.
Backup reports	Status reports are delivered after every backup, enabling you to verify that the backups are working successfully and your data is protected.
Recovers previous versions	Each backup does not simply overwrite the last, instead up to the last 14 backups can be retained, enabling you to recover past versions of documents & files when you need them.

CyberSecure is an Australian leader in online backup & recovery.
